

Vinculum Communications Introduces International Retail Agent Opportunity

San Diego, CA, August 15, 2005 – Vinculum Communications, one the leading providers of international wholesale VoIP communications, today announced the introduction of their retail agent program to resell retail VoIP telephony long distance services to international businesses across the globe. Leveraging their high-quality VoIP network infrastructure, which includes over 800 international destinations and over 150 partnerships with tier one global providers, the service provides telephony sales agents and organizations the opportunity to earn top commissions while delivering superior network quality to their book of business.

Vinculum will deploy their new affordable telephony service on their 5000-port Sansay soft gateway switch, which will be solely dedicated for their new retail platform. International business with a broadband subscription can quickly connect to Vinculum's network and immediately begin saving upwards of fifty percent or more over their current long distance provider.

"By launching this new retail platform, Vinculum realizes its need for diversification and the overall importance of retail broadband telephony to enhance and sustain our revenue growth," said Jayson Jones, senior vice president of retail sales for Vinculum. "Further, Vinculum's relationship approach and commission structure will prove to be a lucrative proposition for strategic partners, master agents, network solution providers and agents world-wide."

About Vinculum

Vinculum has strongly contributed in the pioneering of broadband telephony and through its international industry partnerships has provided tier one providers the standard for pricing; call quality and reliability for the entire VoIP category. ***(need more here that will be the standard pull string description)***

Vinculum Communications Partners with Sansay for Domestic Platform

San Diego, CA, April 13, 2005 – Vinculum Communications, one the leading providers of international wholesale VoIP communications, today announced their partnership agreement with Sansay as the gateway of choice for their domestic platform. Vinculum will deploy the Sansay soft switch as part of their strategic plan to strengthen the quality of their network for calls terminated to and from the US.

“Vinculum initially developed our network backbone utilizing the Nextone gateway platform which has proven itself as a sound decision with regard to reliability and scalability” stated Scott Goodwin CEO and president of Vinculum. “It is important that we strive to research new suppliers and manufacturers of telephony technology so we may continue to improve our overall network quality and the Sansay soft switch was a logical step for our business.”
