

Vinculum Communications Partners with Sansay for Domestic Platform

San Diego, April 13, 2005 – Vinculum Communications Inc., one the leading providers of international wholesale VoIP communications, today announced its partnership agreement with Sansay Inc. as the gateway of choice for its domestic and retail platform. Vinculum will deploy the Sansay soft-switch as part of the company's strategic plan to strengthen the quality of its network for calls terminated to and from the United States as well as traffic for retail customers.

“Vinculum initially developed its network backbone utilizing the Nextone gateway platform which has proven itself as a sound decision with regard to reliability and scalability,” states Scott Goodwin, CEO and president of Vinculum. “It is important that we strive to research new suppliers and manufacturers of telephony technology so we may continue to improve our overall network quality, and the Sansay VSX was a logical step for our business.”

About Vinculum Communications Inc.
